

Introduction to Software Architecture

17-313 Fall 2024

Foundations of Software Engineering

<https://cmu-17313q.github.io>

Eduardo Feo Flushing

Administrivia

- P2B due Thursday September 26th, 11:59PM
- Team Surveys due every Saturday, 11:59PM
 - “Storming” phase
 - Most teams doing well
 - Remember: communication, communication, ...

Conflict Resolution

- Your goal: Find a solution to the problem and move forward.
- Make sure that everybody works from the same set of facts.
- Establish ground rules for your team's discussion.
 - Talk about how the situation made you feel. Never presume anything about anyone else.
- Remain calm and rational. If you feel triggered or threatened, extract yourself from the situation, wait an hour to chill out, and then try again.
- If you reach an impasse, talk to your team leader.
- If your team remains in conflict, escalate to your mentor CA.
 - Your mentor CA *will not solve* your problem. They will help *you* to solve your own problems.

Team survey

RESEARCH-ARTICLE

Identifying Struggling Teams in Software Engineering Courses Through Weekly Surveys

Authors:  Kai Presler-Marshall,  Sarah Heckman,  Kathryn T. Stolee [Authors Info & Claims](#)

SIGCSE 2022: Proceedings of the 53rd ACM Technical Symposium on Computer Science Education V. 1 • February 2022

Smoking Section

- Last **two** full rows

Learning Goals

- Understand the abstraction level of architectural reasoning
- Appreciate how software systems can be viewed at different abstraction levels
- Distinguish software architecture from (object-oriented) software design
- Explain the importance of architectural decisions
- Integrate architectural decisions into the software development process
- Document architectures clearly, without ambiguity

Outline

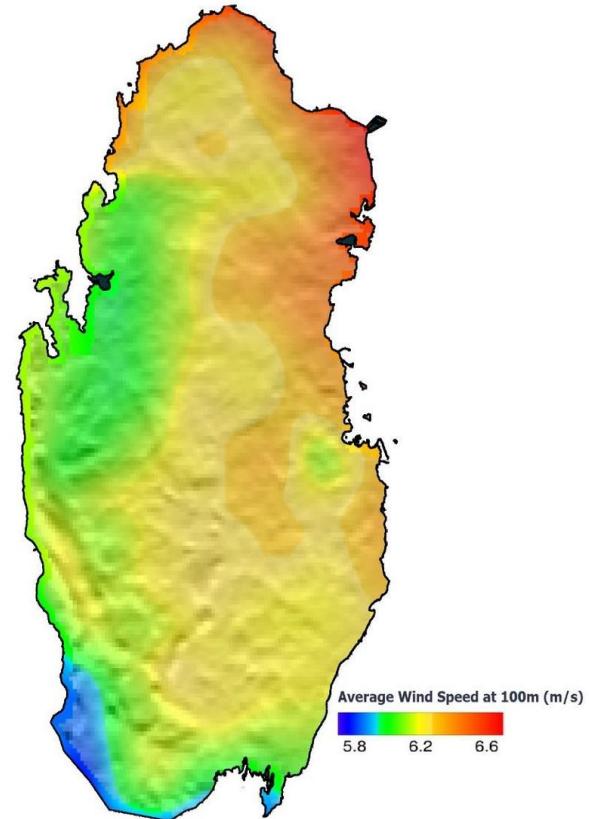

- Views and Abstraction
- Case Study: Autonomous Vehicles
- Software Architecture
 - Definitions, Importance
 - Software Design vs. Software Architecture
- Architecting software
 - Integrating Architectural Decisions into the SW Development Process
 - Common Software Architectures
 - Documentation

Abstracted views focus on conveying specific information

- They have a well-defined purpose
- Show only necessary information
- Abstract away unnecessary details
- Use legends/annotations to remove ambiguity
- Multiple views of the same object tell a larger story

Software Architecture

*“Architecture is about the important stuff.
Whatever that is.”*

Ralph Johnson

design

Editor: Martin Fowler • ThoughtWorks • fowler@acm.org

Who Needs an Architect?

Martin Fowler

Wandering down our corridor a while ago, I saw my colleague Dave Rice in a particularly grumpy mood. My best friend, who was visiting, said this statement, “We shouldn’t interview anyone who has ‘architect’ on his resume.” At first he, like this was an odd turn of phrase, because we all know Dave as one of our leading architects.

The RUP, working off the IEEE definition, defines architecture as “the higher level concept of a system in its environment. The architecture of a software system (or a greater point in time in its organization) is the structure of significant components interacting through interfaces; those components being composed of successively smaller components and interfaces.”

Johnson responded:

I was a reviewer on the IEEE standard that used that, and I argued weakly that this was clearly a completely bogus definition. There is no higher level concept than a system. Components have a different concern than development. Components do not care at all about the structure of significant components. So, perhaps an architect is the highest level concept that developers have of a system in its environment! Let's forget the word

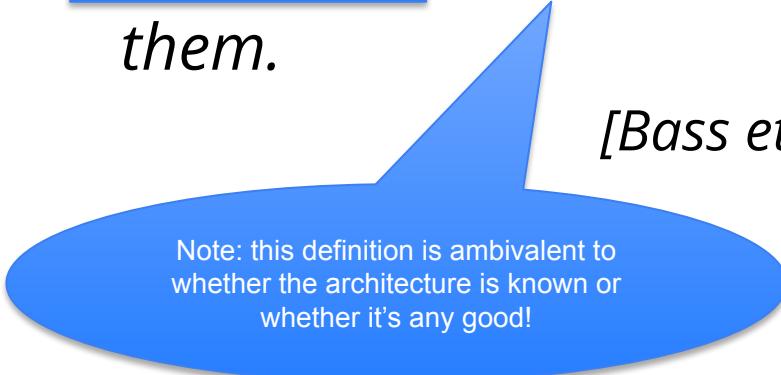

What is architecture?

When I was fretting over the title for *Patterns of Enterprise Application Architecture* (Addison-Wesley, 2002), everyone who reviewed it agreed that “architecture” belonged

Software Architecture

The software architecture of a program or computing system is the structure or structures of the system, which comprise software elements, the externally visible properties of those elements, and the relationships among them.

[Bass et al. 2003]

Note: this definition is ambivalent to whether the architecture is known or whether it's any good!

Software Architecture

- Abstraction
- Elements: roles, responsibilities, behaviors, properties
- Relationships between elements
- Relationships to non-software elements
 - Hardware, external systems
- Described from many different “external” perspectives
- Hides “internal” details

Software Architecture: Motivation

- Facilitates internal and external communication
- Describes design decisions and prescribes implementation constraints
- Relates to organizational structure
- Permits/precludes achieving non-functional requirements
- Allows to control complexity, manage change, and to (better) estimate effort

Architecting Software the SEI Way - Software Architecture Fundamentals: Technical, Business, and Social Influences. Robert Wojcik. 2012

Software Design vs. Architecture

Levels of Abstraction

- 
- Requirements
 - high-level “what” needs to be done
 - Architecture (High-level design)
 - high-level “how”, mid-level “what”
 - OO-Design (Low-level design, e.g. design patterns)
 - mid-level “how”, low-level “what”
 - Code
 - low-level “how”

Design vs. Architecture

Design Questions

- How do I add a menu item in NodeBB?
- How can I make it easy to create posts in NodeBB?
- What lock protects this data?
- How does Google rank pages?
- What encoder should I use for secure communication?
- What is the interface between objects?

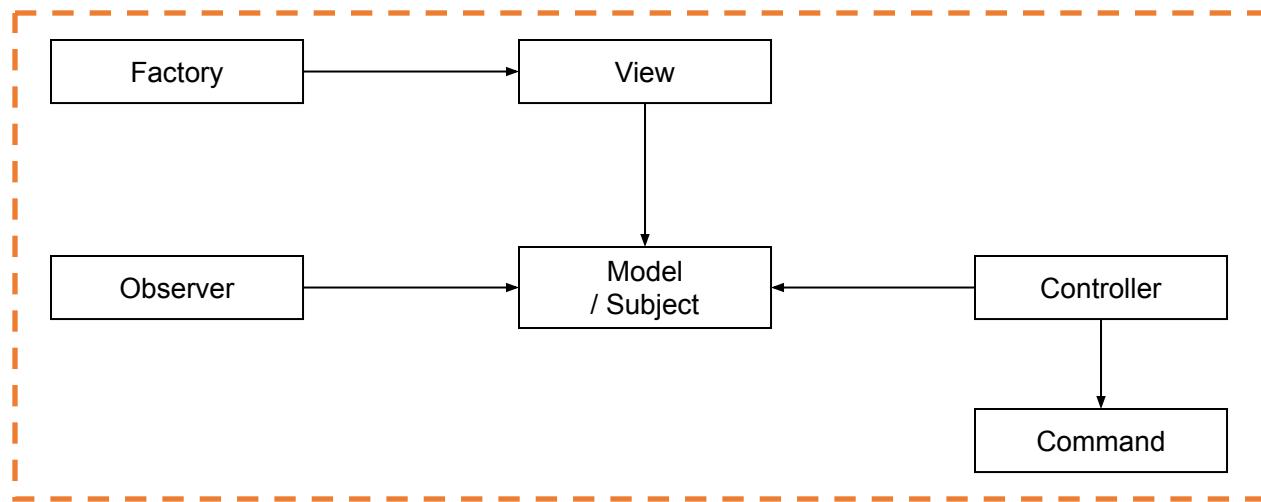

Architectural Questions

- How do I extend NodeBB with a plugin?
- What threads exist and how do they coordinate?
- How does Google scale to billions of hits per day?
- Where should I put my firewalls?
- What is the interface between subsystems?

Every software system has an architecture

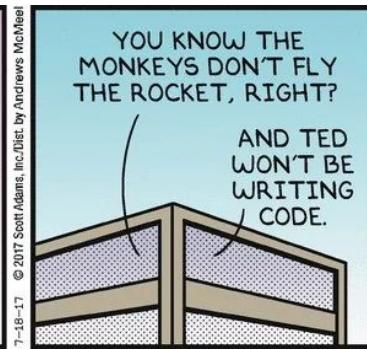

- Whether you know it or not
- Whether you like it or not
- Whether it's documented or not

If you don't consciously elaborate the architecture, it will evolve by itself!

- Case Study: Autonomous Vehicles
- Software Architecture
 - Definitions, Importance
 - Software Design vs. Software Architecture
- **Architecting software**
 - Integrating Architectural Decisions into the SW Development Process
 - Common Software Architectures
 - Documentation

Why Document Architecture?

- Blueprint for the system
 - Artifact for early analysis
 - Primary carrier of quality attributes
 - Key to post-deployment maintenance and enhancement
- Documentation speaks for the architect, today and 20 years from today
 - As long as the system is built, maintained, and evolved according to its documented architecture
- Support traceability

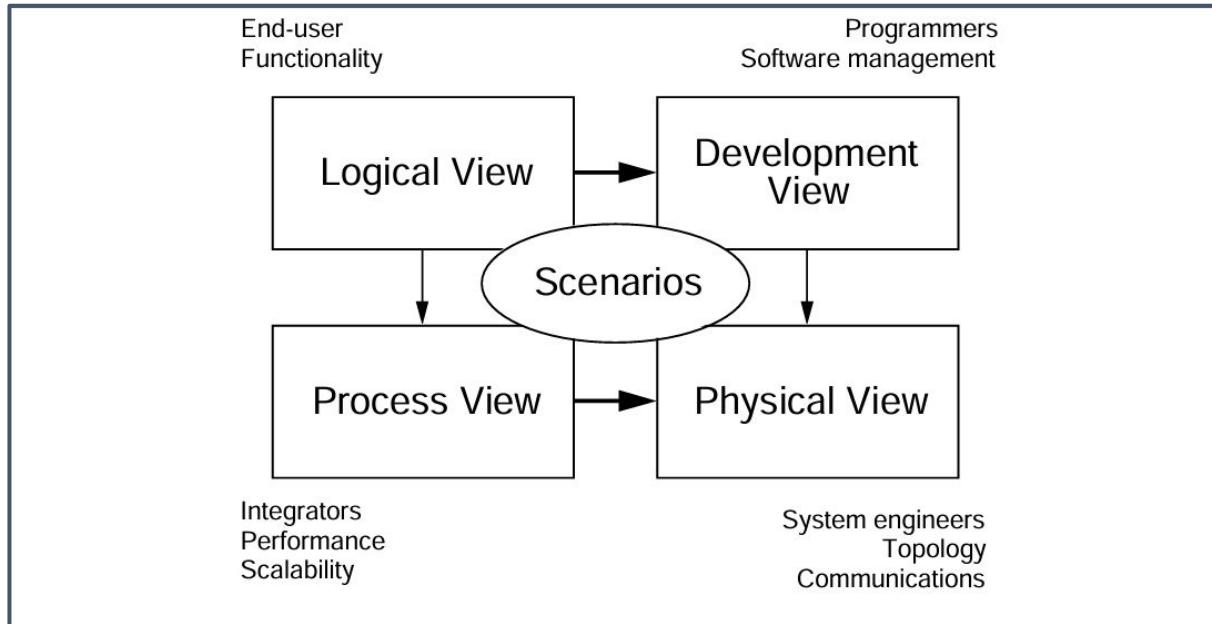

5000 years old

Umma (now Iraq),
now kept in
Vorderasiatisches
Museum, Berlin,
Germany

Views and Purposes

- Every view should align with a purpose
- Views should only represent information relevant to that purpose
 - Abstract away other details
 - Annotate view to guide understanding where needed
- Different views are suitable for different reasoning aspects (different quality goals), e.g.,
 - Performance
 - Extensibility
 - Security
 - Scalability
 - ...

The “4+1” view model

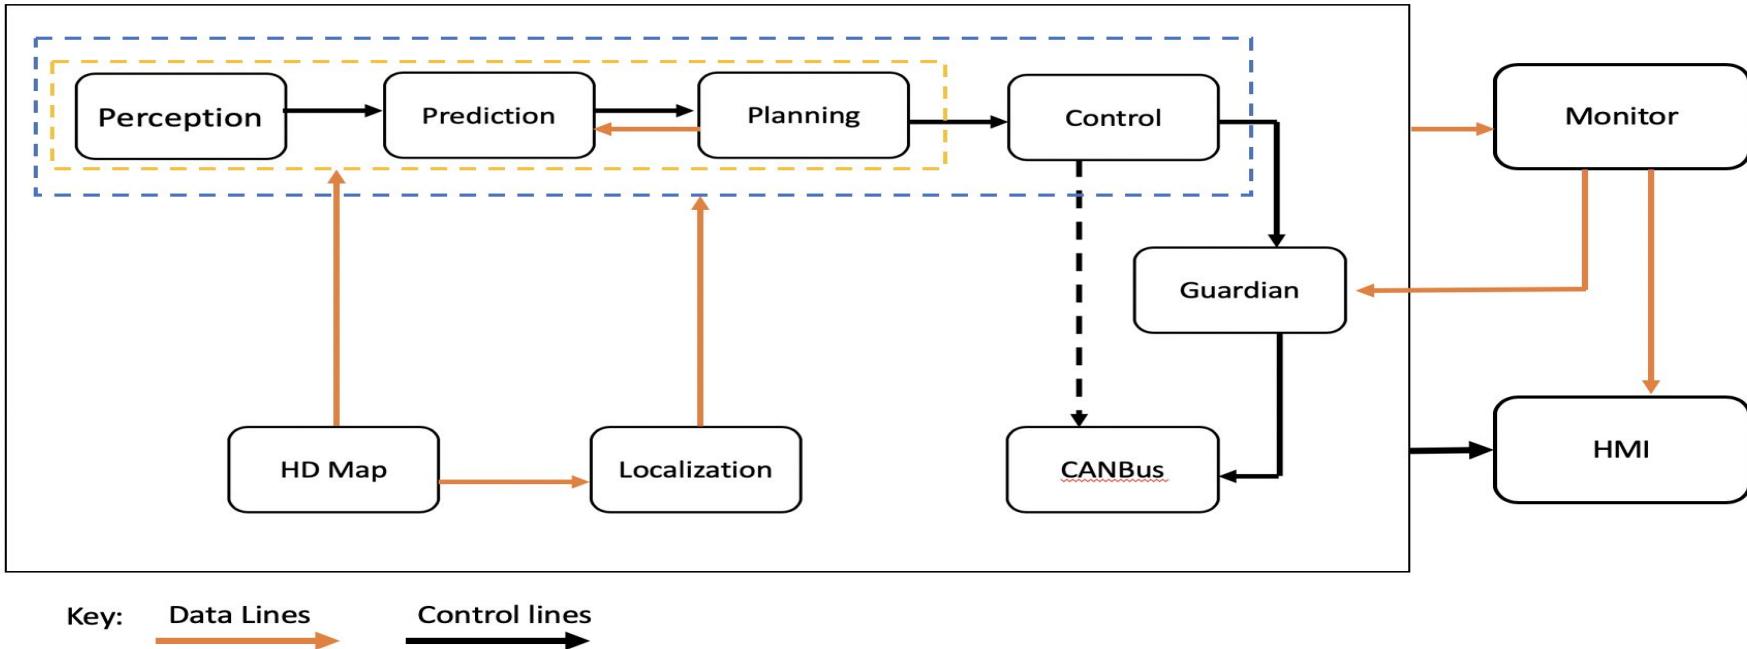

Philippe Kruchten, Architectural Blueprints—The “4+1” View Model of Software Architecture[

Common Views in Documenting Software Architecture

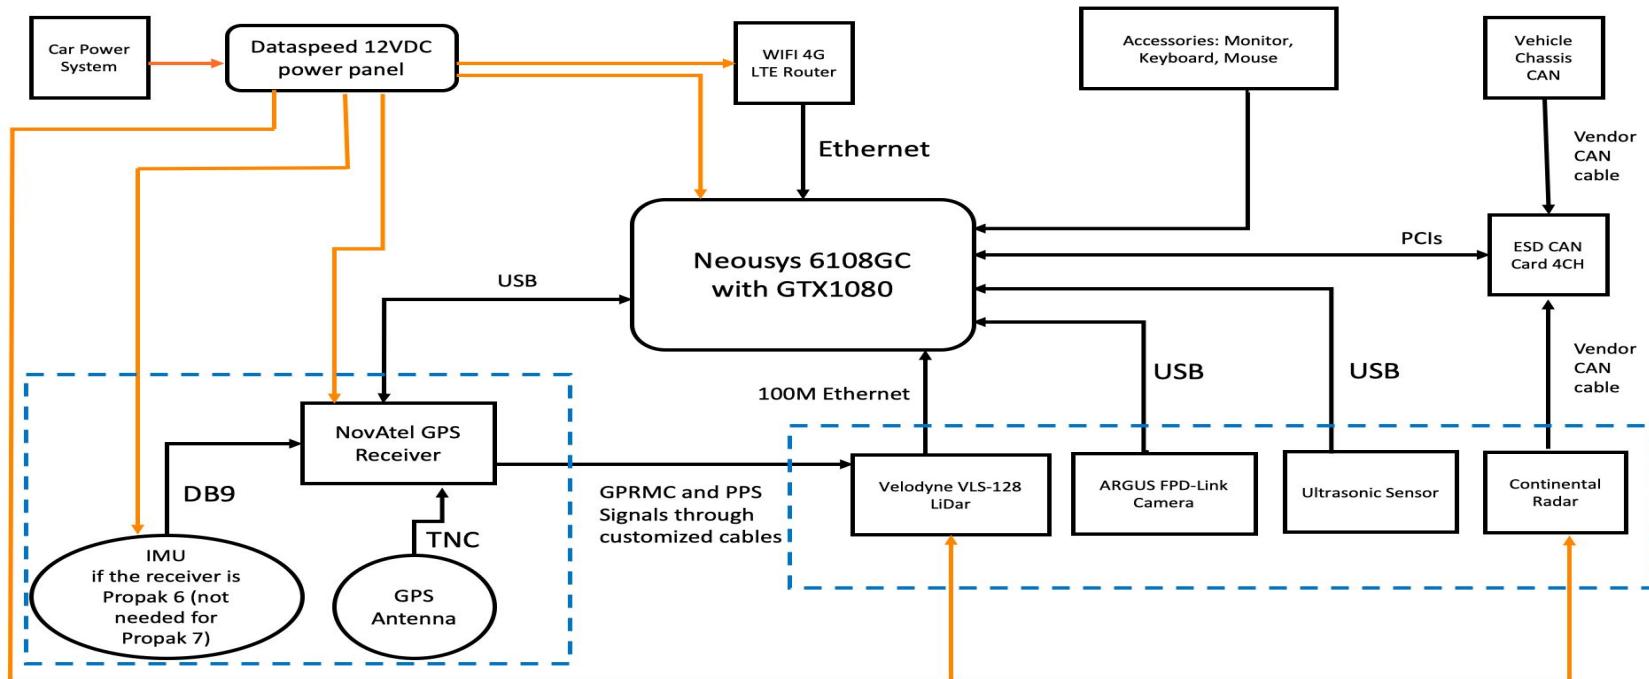

- Logical View (End user)
 - Functionality
 - Subsystems, structures and their relations (dependencies, ...)
- Process View (System Integration)
 - Non-functional aspects
 - Components (processes, runnable entities) and connectors (messages, data flow, ...)
- Development View (Developers)
 - Software modularity / decomposition
- Physical View (System Engineer/DevOps)
 - Hardware structures and their connections
 - Deployment
- Scenarios (All)
 - Outline tasks/use cases
 - Sequences of interactions between objects and processes

Btw, I'd like to apologize for Twitter being super slow in many countries.
App is doing >1000 poorly batched RPCs just to render a home timeline!
